ИННОВАЦИОННЫЕ ТЕХНОЛОГИИ ФОРМИРОВАНИЯ РЕЧЕВОЙ ДЕЯТЕЛЬНОСТИ СТУДЕНТОВ

Аннотация: В данной статье рассматриваются основные педагогические условия развития коммуникативных навыков и коммуникативной компетентности студента на уроке английского языка. Инновационные технологии, предметно-языковое интегрированное обучение CLIL внедрены в процесс обучения английскому языку. Интегрированное занятие проводится с участием студентов экспериментальной группы. Педагогические условия формирования речевой деятельности разработаны на основе компетентностного подхода. Коммуникативная компетентность – это способность эффективно использовать язык для общения в социальной и вузовской среде. Коммуникативное обучение языку предполагает развитие языкового мастерства через тексты по специальности и на материале кыргызских национальных игр.

Ключевые слова: речевая деятельность, английский язык, профессионально-ориентированное обучение, эксперимент, межпредметные связи.

СТУДЕНТТЕРДИН КЕП ИШМЕРДҮҮЛҮГҮН КАЛЫПТАНДЫРУУНУН ИННОВАЦИЯЛЫК ТЕХНОЛОГИЯЛАРЫ

Аннотация: Макалада англис тили сабагында студенттердин коммуникативдик көндүмү жана коммуникативдик компетенттүүлүгүн өнүктүрүүнүн негизги педагогикалык шарттары каралган. Инновациялык технологиялар, предметтик-тил үйрөтүүчү интеграцияланган CLIL окутуу окуу процессинде камтылган. Интеграцияланган сабактар эксперименталдык тайпанын студенттеринин катышуусунда жүргүзүлгөн. Кеп ишмердүүлүгүн калыптандыруунун педагогикалык шарттары компетенттүүлүк өнүгүнүн негизинде каралат. Коммуникативдик компетенттүүлүк - бул социалдык жана жогорку окуу жайларындагы чөйрөдө баарлашуу үчүн

тилди натыйжалуу пайдалануу. Тилге коммуникативдик окутуунун негизин тил билүү деңгээлин жогорулатуучу кесипке багытталган тексттер жана кыргыздын улуттук оюндары түзөт.

Ачыкч сөздөр: кептик ишмердүүлүк, англис тили, кесиптик-багытталган окутуу, эксперимент, предмет аралык байланыш.

Introduction. In the globalization processes, integration and internationalization of different spheres of human life, Kyrgyzstan reflected in the multitude of professional and personal contacts of different cultures, as well as the new socio-economic and political relationship with the USA, especially Western and Eastern Europe and Asian countries. Necessity of knowledge foreign languages, in particular, English, as a socially and personally significant factor, expanding the possibilities of self-actualization of a modern specialist with the skills of professional communication. In Kyrgyzstan, the English language is required in science, education, art, advertising, tourism, mass media and physical culture. Fluency in a foreign language goes a long way in the future for all the specialists. Among them are athletes, fitness professionals, and political, educational, professional, social, industrial, scientific, cultural, investment trends of the importance of English language proficiency

Foreign language proficiency is currently not only prestigious, but also necessary for a specialist of any profile. Intensive development of international sports contacts, the increasing competition of foreign rivals in international competitions leads students to be the best communication culture foreign language competence in "Physical Education" to communicate with foreign colleagues in international competitions, championships, Olympiads. Expansion of scientific contacts, visits of specialists abroad in order to study the experience of foreign colleagues, to participate in international scientific symposiums, conferences also increases the demand for knowledge of a foreign language. In this regard, there are increased requirements for the level of language training of specialists in the field of "Physical Education".

Communicative competence is the ability and use language effectively to communicate in social and high school environments. Communicative language teaching involves developing language proficiency through meaningful texts about Kyrgyz national games. This approach to teaching provides authentic opportunities for learning that go beyond repetition and memorization of grammatical patterns in isolation. A central concept of the communicative approach to language teaching is communicative competence: the learners' ability to understand and use language appropriately to communicate Optimization of communicative space of higher education institution that is making its educational space as the major condition. In structure of educational space is allocated emotional and motivational, information and informative and activity and practical components. Pedagogical communication as an important component of educational space: not only as special system of social and psychological interaction of teachers, but also as activity as a result of which there is a training in general and developing students and teachers' communicative

competence. Pedagogical communication in the course of developing communicative competence is the major educational means. It accentuated subject essence of efficiency causes its pedagogical communication: it consists of masterful possession of the teacher of the speech and conscious and vigorous educational activity of students on the example of national games. As the second, condition of formation the students' speech activity of non-philological specialties use of interactive technologies of teaching for development of motivation to high-quality students' communicative competence. Those pedagogical technologies, which focus modern students on vigorous communicative activity in knowledge, concern to *15 effective communicative system of exercises*. Active realization of inter subject communications and integrative lesson are defined as the third pedagogical condition of formation communicative competence. Formation communicative competence has to become one of the main objectives not only when studying the English language disciplines, but also all other disciplines studied by students according to the curriculum. Existence of three pedagogical conditions for optimization of studying process of formation the kinds of speech activity: reading, listening, writing and speaking students in the field of physical culture using 15 effective communicative system of exercises.

In conditions of transition of modern Kyrgyzstan to a market economy, the major part of the population is more and more actively involved in economic activities. As practice of modern business shows the ability to conduct a business conversation is one of the most important conditions of commercial success. Therefore, the lessons foreign language have great value for students.

The main task of the educational system is the preparation future specialists of a modern, competent, competitive personality, ready for continuous professional growth and possessing the skills of professional communication with representatives of other foreign cultures.

The Russian scientist V.I. Andreev expresses definition to pedagogical conditions: “Педагогические условия как обстоятельства процесса обучения, которые являются результатом целенаправленного отбора, конструирования и применения элементов содержания, методов, а также организационных форм обучения для достижения определенных дидактических целей” [4, p.428].

According to Russian researchers L.S. Kryuchkov., N.V. Moshchinskiy teaching speaking includes three components: 1) an introduction to the memory of students of linguistic material; 2) development of skills to operate this material; 3) development of skills in the use of speech for real communicative purposes [6, p.125].

The aim of the research: to define pedagogical conditions of the formation students' speech competence in English classes and to make a pedagogical experiment of their efficiency.

This aim is specified in the following objectives:

1. To determine the essential characteristics of the pedagogical foundations of the formation speech competence language teaching approach with using innovation technology;

2. Develop and substantiate the technology of development students' speech activity skills in the English classes towards creative approach;
3. To conduct an experimental study of the pedagogical conditions for the formation of students' speech skills in the field of physical education in English classes.

However, unfortunately, the level of proficiency in a foreign language among students of a non-linguistic profile is rather low and insufficient. A high level of professional communication, at present, is extremely necessary for the successful implementation of economic, technical, cultural activities of specialists. The level of communicative activity in English does not always meet the requirements of modern production. This means low learning outcomes, absence of practicing a foreign language, incorrect preparation syllabus in the field of "Physical Culture". Formation of English language skills among students is an inseparable part of the national culture. Therefore, scientific research, creative approach is the main task of the research.

Analyze scientific-theoretical, scientific and educational research references. Systematised effectiveness of the developed communicative system of exercises the pedagogical conditions of developing the speech competence of students in the field of physical education in English classes in the materials of national games. A textbook on the development of students' speech (speaking, reading, writing and listening) in the field of physical education was has been published in the materials of national games. Definition of pedagogical conditions of formation the students' skills speech activity in the field of physical education.

The fundamentals and provisions of the scientific and pedagogical vocational-oriented training and pedagogical basis and the contribution of pedagogy as a component of education system. For new generation of high school physical education-oriented specialties will help to create a competency-based standards and normative documents. The terms and pedagogical conditions of formation of physical activity of students in the field of speech and model will help for teaching high school students in academic programs and teaching abilities and skills will guide the development and high-quality vocational-oriented training.

The methods of research: theoretical methods: scientific-theoretical and methodological analysis of sources; empirical methods: questioning, interviews, observation; pedagogical experiment, comparison; the total logical methods: analyzing the system, the results, modeling. At the end of the twentieth century there have been significant changes in the methods of teaching English, developed new technologies.

Interactive methods, CLIL, multiple intelligence theory was used during the pedagogical experiment.

Method of integrated language learning in an academic subject processes of English language teaching CLIL (Content and Language Integrated Learning) testing ... the Term CLIL is the first of 1994, Anne and interests and attracts many David Marsh Mal (Finland) , methodology of language teaching, majoring in a foreign language as the appointment of experts not made [3, p.123]. Spain, Italy, Russia, the practice is widespread in France.

We studied the multiple intelligences (MI) chart in the in the seminar for English teachers “Special education and differentiated instruction” at the lingua school. In my class there are several students with the following multiple intelligences. During English lesson, we check student’s Multiple Intelligence to develop their possibilities in my groups. As we research the pedagogical conditions of formation students’ speech activity, 246 students participated in the experiment, who studied at the second course of pedagogical and national kinds of sports; training faculty; prescription preparation and physical culture. One hundred twenty three students were control and one hundred twenty three students were experimental groups.

English language disciplines, but also all other disciplines studied by students according to the curriculum Abdybekova, N.A. [1, p.23]. Existence of three pedagogical conditions for optimization of studying process of formation the kinds of speech activity: reading, listening, writing and speaking students in the field of physical culture.

Pedagogical conditions of formation of students’ speech activity at the English lesson through the national games are actual issue. Optimization of communicative space of higher education institution is making its educational space as the major condition. The educational space is allocated emotional and motivational, information and informative and activity and practical components. Pedagogical communication as an important component of educational space: not only as special system of social and psychological interaction of teachers and trained, but also as activity as a result of which there is a training in general and formation of speech competence in particular of both teachers, and students. Pedagogical communication in the course of formation of speech competence is the major educational means. It accented subject essence of efficiency causes its pedagogical communication: it consists of masterful possession of the teacher of the speech and conscious and vigorous educational activity of students on the example of national games. As the second, condition of formation the speech, activity of students of non-philological specialties use of interactive technologies of training for development of motivation to high-quality speech activity of trainees. Those pedagogical technologies, which focus modern students on vigorous communicative activity in knowledge, concern to the most effective system of exercises on the material ethno sports. Active realization of inter subject communications and integrative lesson are defined as the third pedagogical condition of formation of speech activity. Formation of speech activity has to become one of the main objectives not only when studying the English language disciplines, but also all other disciplines studied by students according to the curriculum [3, p.122].

Results of own research and discussion: This research is done for identifying the structural analysis of pedagogical conditions of formation sportsmen-students’ communicative competence in the Kyrgyz Republic. Data collecting tool of a semi-structured interview form, developed by researcher has been used in this research, which includes 30 questions, and collected data has been analyzed by content analysis technique. The research’s study group is composed of 449 students,

who are Kyrgyz state academy of physical culture and sports (pedagogical faculty training and national sports sciences; faculty of physical education and military preparation), Kyrgyz-Turkish Manas university (physical education sports high school).

Table 1. – Explanation ranks of the development of students’ professional knowledge

The results of the survey (average of the experimental group)	Ranks	The result of the survey (the average of the control group)
Being a highly professional opportunities	1	English language learning through integrated lessons
In foreign countries to participate in international sports events	2	Working with learning the English team
English language learning through integrated lessons	3	In foreign countries to participate in international sports events
Get ready for the future professional activity	4	To gain new communication skills
Course of new forms of fun, in fact,	5	Being a highly professional opportunities
To gain new communication skills	6	Get ready for the future professional activity
Working with learning the English team	7	Course of new forms of fun, in fact,
Independent work in learning the English language	8	Working with learning the English team
Kyrgyz State Academy of Physical Culture and Sports (Pedagogical faculty training and national sports sciences; Faculty of Physical Education and military preparation)	324 students 100% of the survey, the questions are fully answered	

Kyrgyz-Turkish Manas University (Physical education sports high school)	125 students 100% of the survey, the questions are fully answered	
In total	449	100%

We used technology of professional-oriented training in English classes. The system of exercises opened up opportunities for critical thinking, cognition, comparison, analysis and creative learning of the English language. Creating a dialogue, monologue, funny texts, finding answers to frontal questions, description of the appearance of famous athletes, interviewing, singing, working with video and audio tasks, working in pairs, in a group, discussion, debate, discussion confirmed in practice

We presented two books: English language training manual for teachers and students: Development of oral speech skills of students in the field of "physical culture" the second edition [2, p.5]. Training course material for English teachers [2] compiled by us. Manuals supports the need to differentiate the curriculum so all students are able to participate in the same content area during a lesson. Education a priority to improve the quality of teaching and training of professionals. State educational standards, curriculum, English language programs, the 360 page manual has been published with the stamp of the Ministry of Education and Science.

National sports in brief English-Russian-Kyrgyz dictionary on the basis of sports terminology were created in 3 languages for the students of experimental group. All previous training focuses tools, grammar, but our manual "Physical training purposes mentioned in the cultivation of students' speech activity" is directed to the formation of the professional specialty of oral and written, audio video, CD drive, which is different from the other materials. Manual consist of interesting materials with critical thinking, which includes the text, clear situational exercises; Games, pictures, tables, clusters, and the type of chart, sinkvein. Students learn to work independently; the development of intellectual thinking, love, patriotism, and has contributed to the moral upbringing of sensitivity. We have developed a working program aimed at students, textbooks, exercises system of vocational qualification, 80% of physical education and sports, and 20% of total posts. Based on the focus of students on vocational training course organized interesting, proven and available. Students are selected according to the type of sport, using sports terminology, right, cultured, learned to speak.

Exercises in shaping the teaching experiment fifteen communication system exercises in order to develop students' intellectual thought process through a situational training.

Knowledge of critical thinking, analyze, compare, and opened the opportunity to learn the English language, creativity and skills system. Create a fun dialogue, monologue, text, front, answers to questions, the famous sportsman physical description, interviews, songs, video, audio kit with instructions to work with the individual, pair and group work validated through the practice.

The results of the research:

1. According to the subject of the study site and the formation of physical training of students in the field of English-language speech activity detected in pedagogical terms.
2. Physical Education students toward English-language speech from an analysis of the methods of generating activities aimed at training students in the field of physical education, English language classes, recounting the activities of the grouping of technology on the development of communicative competence has developed a tool which includes a system of exercises.
3. The prospective physical education specialists confirmed by the effectiveness of vocational training and pedagogical conditions and pedagogical experiments, English class teaching model of the formation of physical activity of students in the field of speech and summarized by the terms of the efficiency of pedagogical experiment.

Finally, Optimization of communicative space of higher education institution that is making its educational space as the major condition as we said before. Our students have learnt sport terminology in English, Russian and Kyrgyz languages.

ОБЯЗАТЕЛЬНО-КОЛЛЕКТИВНАЯ МЕТОДИКА КОНТРОЛЯ СОСТАВЛЕНИЯ ФАЙЛОВ С ЗАДАННЫМИ СВОЙСТВАМИ

Аннотация: В статье для реализации принципа «научиться работать вместе» показана разработанная нами методика «обязательно-коллективного выполнения заданий». В целях повышения чувства ответственности за выполненную работу студенты работают в командах из двух человек. Результат работы одного из членов команды рассматривается как задание для другого члена команды. В статье приведен сценарий проведения практического занятия с использованием предлагаемой нами методики. Приведены примеры некоторых заданий, составленных с использованием обязательно-коллективной методики.

Ключевые слова: задание, методика, работать вместе, студенты, команда, обязательно-коллективная методика, практические занятия.
